December 6, 2018

As of the date above Flint Hills Resources, LP (FHR) expandable polystyrene (EPS) products comply with 2011/65/EU Restriction of Hazardous Substances (RoHS) [amended by Directive (EU) 2015/863].

Flint Hills Resources does not intentionally add heavy metals (lead, mercury, cadmium, or hexavalent chromium), polybrominated biphenyls (PBB’s), polybrominated diphenyl ethers (PBDE’s) or the phthalates listed (DEHP, BBP, DBP or DIBP) to any of our EPS products.

We certify, based upon independent third party testing, that all of our expandable polystyrene resins, as supplied, comply with the current RoHS directives. Copies of the actual test reports on FHR resins are available upon request. Records relating to the manufacture of these materials will be maintained by Flint Hills Resources for at least 3 years in the event that a review is required.

FHR strongly recommends that each customer and/or end-user independently determine the suitability of FHR product(s) under actual conditions of processing and end-use. Ultimately, customers must make their own determination that use of this product is safe, lawful, and technically suitable for their intended applications.

The information above is provided independently of any sale of the product. It is provided for the purpose of communicating regulatory compliance of the EPS as shipped from a Flint Hills Resources location to our customers in its pellet form. Flint Hills Resources will not notify you should a change in regulation(s) require a change to this statement.

If you have additional questions regarding RoHS and our products, please send them to michele.whiteley@fhr.com.

Regards,

Michele Whiteley
Commercial Compliance Manager
